FINAL PROJECT FIRST DELIVERY

Our idea:

Our main idea of our app is to showcase different varieties of recipes with their ingredients and caloric information to the user. It is a simple app where the user can search any type of food they want to cook and the app shows a list of them so people can choose whichever they want.

Our Design Concept:

Simple design with a menu screen where there is a search bar, showcase of a list of startup recipes and a menu bar at the bottom.

Other screens are the recipes themselves, showcasing the calories, fotos of the food, and the necessary information to cook the food. There is also a favorite button to save the user's most liked recipe.
